

bibliotheca flex bookDrop™ range

Create custom returns experiences that meet your library's needs

The flex bookDrop range makes it quick and easy for users to return library items. The solution was designed to be customized for unique library needs, spaces and workflows.

Whether it be a drop-and-go option that allows busy families to return multiple items at once or a drive-up option that provides ultimate convenience on weekends, flex bookDrop is completely customizable to meet your operating objectives. With many front-end and back-end options, we welcome the opportunity to guide you through which features make sense for your space, workflow, staff needs and user expectations.

No lock drive-up front

Manual flat front

Ultimate convenience with a "Drop & Go" experience

Most busy users want to return their items as quickly as possible. With every flex bookDrop configuration, users are able to drop off multiple items at one time and quickly get on with their day!

Immediately and accurately update user accounts

With automatic check-in, RFID-enabled items are instantly removed from user accounts. This allows users to borrow new items immediately and improves library experiences for busy families with children and library power users. *

Get items back on the shelves faster

Integrating flex bookDrop with an automated materials handling (AMH) solution maximizes efficiencies for staff. Less staff are required in the backroom, providing more time for community engagement and program development. Learn more about our flex AMH range [here](#).

Configure solutions remotely and run custom reports

When integrated with our central reporting and configuration software, libraries can remotely monitor the status of flex bookDrop, setup custom email/SMS alerts and export powerful reports and item return statistics. Learn more about libraryConnect.com [here](#).

Efficiently manage holds for quick processing

Holds slip printing is an option for RFID libraries. Using custom-designed holds slips that print instantaneously, staff are able to quickly pull holds items from returned materials, making items quickly available for those on the wait list. *

Companion solutions maximize staff time

When integrated with bibliotheca's inventory solutions, libraries can quickly pin-point items that need further processing, like new hold requests or incomplete sets. With the RFID workstation, processing items right at the point of return creates efficiencies and ease for staff. *

A range of unlocking options provides flexibility by design

Automatic unlocking can be aligned with standard or extended library hours, and within the embedded calendar system. Manual unlocking provides ultimate control and is easy to override. With RFID unlocking, only verified items open the bookDrop, keeping out waste and non-library items.

A software interface designed to make staff happy

With a simple, intuitive UI, staff can determine at a glance items that need attention or are ready to be shelved. No need to visit a separate backroom PC to determine item check-in status or print reports. With everything right at their fingertips, processing is efficient and enjoyable.

* Requires ILS/LMS connection.

flex bookDrop feature comparison chart

All units suitable for internal or external installation and are DDA / ADA compliant when properly installed.

Patron receipts are not supported
direct glass installation not supported
